

TDS text for TRIDENT T-Shirt Booster

Product Description:

Trident T-Shirt Booster is a completely transparent, non-yellowing product that must be used with Trident Airbrush colors when spraying on T-shirts and other apparel. It seals and protects the airbrush work and protects the airbrush work during washing.

For textiles, this product is essential, as not using Trident T-Shirt booster will compromise the longevity and quality of wear of your airbrush design.

Trident T-Shirt Booster is designed for use on most textile garments. For best results, as with Trident Water Based Airbrush Colors, use on 100% Cotton Garments. It will also work on wool, polyester, polyester blends and leather.

Not for use on Silk or other delicate items.

Product Use:

Trident T-Shirt Booster is used as a top coat over airbrushing completed with Trident Airbrush colors on fabric and textiles. It is applied **after** the design is finished but **before** the item is heat-set/pressed

For best results, spray two (2) medium coats of T-shirt booster over the airbrush design on any T-Shirt, Hat, Hoodie, Jeans, etc.

As the product is transparent, cover the entire design thoroughly including a buffer around the edges of 2-3 centimeters (1 inch) to ensure you have covered the design fully.

Application:

- Trident T-Shirt Booster is used directly from the bottle. NO reduction is required. Reducing Trident T-Shirt booster will actually compromise its performance.
- Trident T-Shirt Booster is best applied with a 0.5 nozzle, though can be applied from a 0.35. Smaller is not recommended as even coverage is important.
- Trident T-Shirt Booster can be applied immediately after your final colors are dry.
- Trident T-Shirt Booster can also be applied well after T-Shirt is completed and even on garments and items painted at an earlier time.
- T-Shirt Booster is best used at 30-50psi
- T-Shirt Booster is for textiles only (not paper or canvas)
- T-Shirt booster **must** be heat-set after application over design
- For best results, curing should be executed with a heat press or Iron.
 - Heat Press on 110°Celsius/230° Fahrenheit for 35 seconds
 - Iron on High (through Teflon sheeting or grease proof paper) for 15 minutes. Move iron slowly, but constantly around entire design with firm pressure.
 - For caps, you can cure with a hair dryer or heat gun. NOTE: Ensure not to melt or burn your item if using heat gun.

Clean Up:

Trident T-Shirt Booster cleans up with Trident Airbrush Cleaner
